

Mike Furlong, CM-BIM

Principal, Integrated Project Solutions, LLC

Mike is a Principal of Integrated Project Solutions, LLC, a consulting company that specializes in many aspects of design, building and construction. Much of that specialization pertains to Building Information Modeling (BIM). BIM is an up and coming field in the building and construction industry and Integrated Project Solutions is regarded as a leader in that field.

Mike's introduction into the world of BIM came rather easy and stems from the fact that he has been designing in 3D for more than two decades using various programs. He has been responsible for coordinating more than \$500M in construction dollars across the nation. These projects have varied type and use. From health care to higher education to mixed use buildings, Mike has experience in all areas and building types.

Mike attained his Certificate of Management - Building Information Modeling, an accreditation awarded by the AGC after completion of the required coursework and passing a national exam. Mike is also involved in the instruction of the CM-BIM course as an approved instructor. Mike has previously been an Applications Engineer with Autodesk and is certified to train and support various Autodesk products. Mike is a BIM advocate and actively participates on the AGC Committee to revise the ConsensusDocs BIM documents.

Mike has taken his knowledge and experience of construction, and coupled that with his ability to use 3D software, to create a virtual environment from which to study building design and the interaction between the various system components that will be installed within that building.
